1 Installation

Prerequisites for the installation

- Nokia PC Suite v6.x or higher is installed on your computer (PC or laptop). Get the latest version of Nokia PC Suite here: <http://www.nokia.com/pcsuite>
- You have the relevant HiPath MobileConnect installation pack on your device.
- The telephone is **not** in offline mode (flight mode).

Installation process

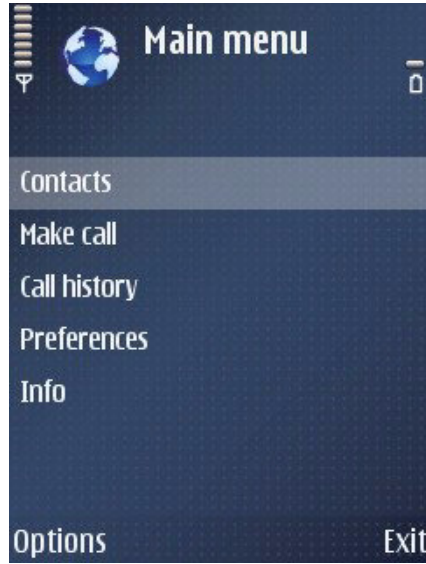

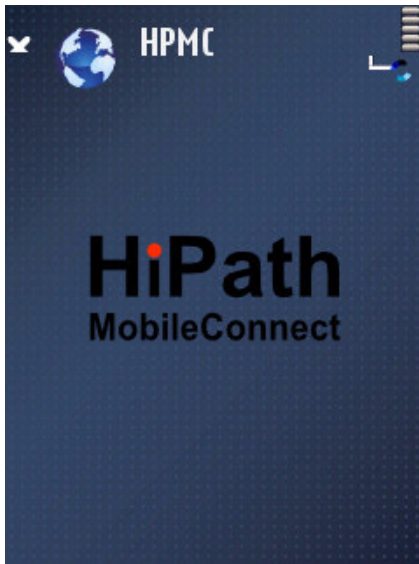

1. Connect the active telephone to the PC using the cable delivered by the manufacturer. Start Nokia PC Suite.
2. Choose **Install Application** from the Nokia PC Suite menu to install the SIS file of the HiPath MobileConnect client. Follow the instructions on the PC and mobile phone. If there are existing HPMC installations on the mobile phone, choose **Accept** to overwrite them.

Note: Do **not** install the software on the memory card (MMC); install it in the telephone memory.

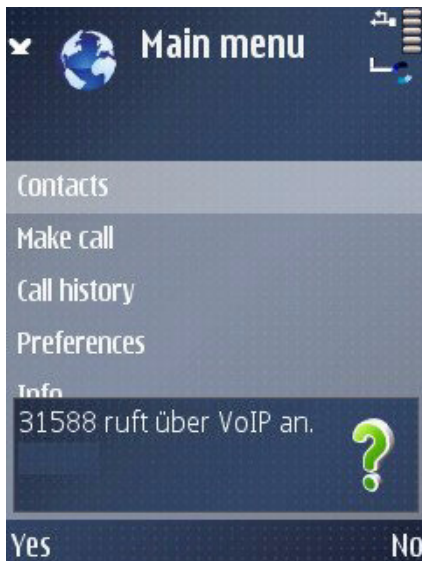

3. You can now close Nokia PC Suite and disconnect the device from the PC. Press the **Menu** key on your device to display the installation; HPMC is located in *Installations*.

2 Opening and Closing the HPMC Client

1. You can open the HiPath MobileConnect client by clicking the **HPMC symbol**. Then wait for a few seconds until the main menu appears.

2. To close the HPMC software, press the right-hand selection key and then confirm using the left-hand selection key.

3 Functions

Basic functions

The main menu contains the following menu items:

- Contacts: Access to the local list of contacts
- Make call: Function for dialling calls
- Call history: Access to call list database
- Preferences: HPMC configuration menu
- Info: General information on HPMC

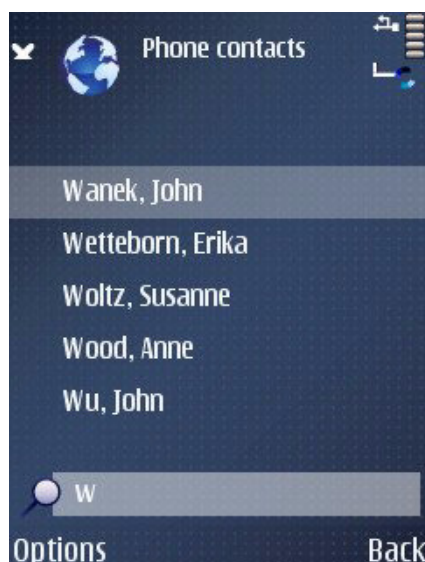

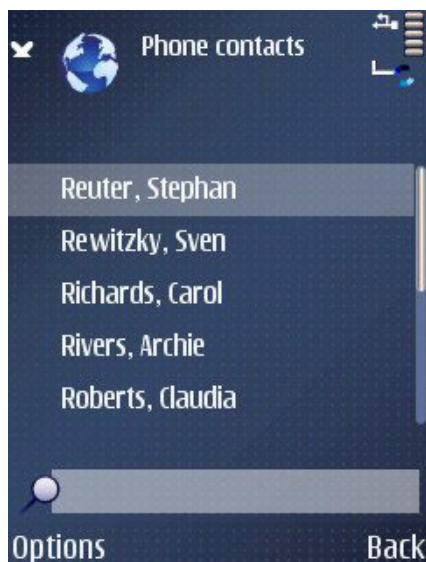

You can make calls and navigate through various menus by using the selection keys, navigation keys, green action key, and red action key.

3.1 Contacts

The HiPath MobileConnect contacts list allows you to manage your contacts. You can use the list in the same way as a phone book.

When you open it, a scrollable list of names appears.

You can search the list simply by using the keypad to enter characters. The system checks both first and last names against the entered characters. As soon as you enter a letter or string of letters, the system displays a list of matching names.

Functions

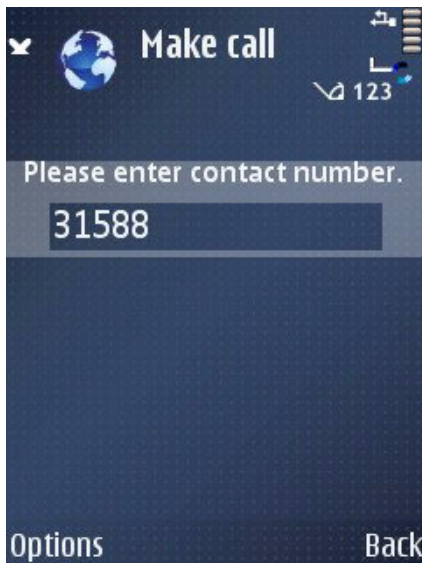

Making a call

You can use the contacts list to call, edit, delete, and update existing contacts and to add new contacts by pressing the left-hand selection key (Options) and then choosing the option you require.

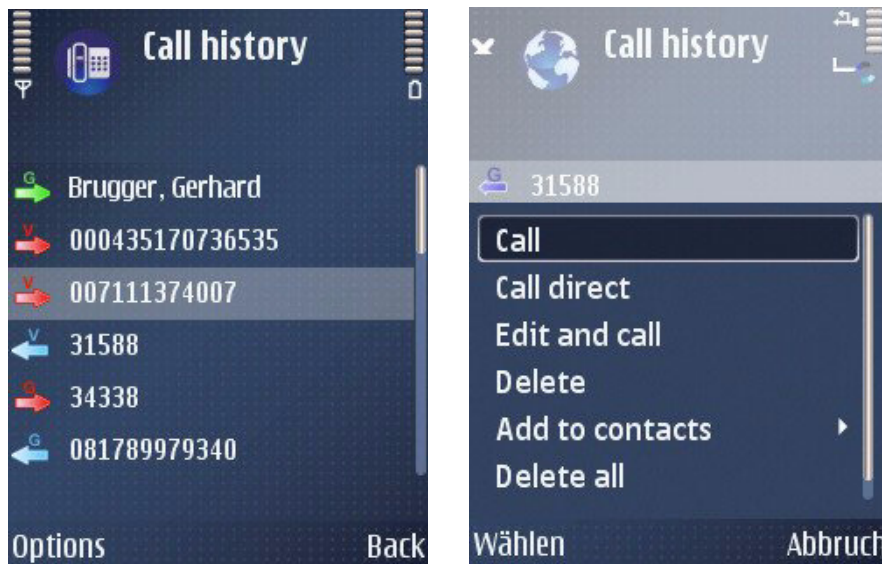

3.2 Making a call

There are several ways of making a call:

1. **Via the Make call menu or by directly entering a phone number:** Choose **Make call** and enter the phone number of the person with whom you wish to speak or enter the number directly in the main menu. Then press the **green action key** to make the call.

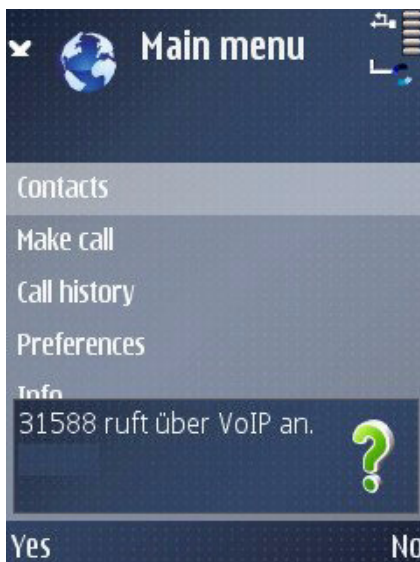

2. **From the contacts list:** Open the contacts list and use the **navigation keys** to select the person with whom you wish to speak. Press the **green action key** to make the call.
3. **From the call history:** Choose **Call history** from the main menu and use the navigation keys to select the person with whom you want to speak. Press the **green action key** or choose **Options** -> **Call** to make the call.

3.3 Receiving phone calls

The client uses a ring tone to signal an incoming call. In addition, it displays the calling number and call type. If the caller is already saved in your phone book, it displays the name of the person.

You can take the call or ignore it by pressing the **green or red action key** or by choosing one of the two selection keys - **Yes** or **No**.

3.4 Ending a call

Press the **red action key** to end a call.

Functions

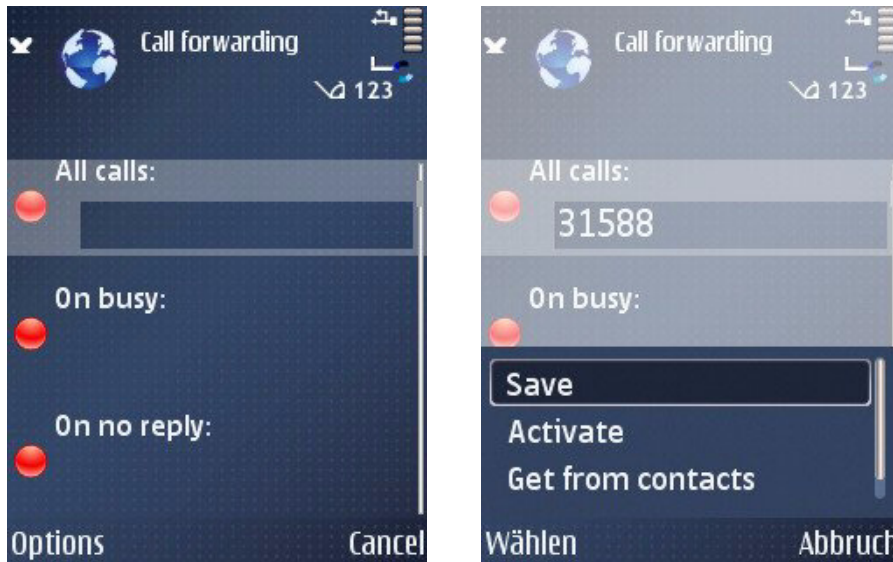

Diverting calls

3.5 Diverting calls

1. Automatic call forwarding:

To divert incoming calls, choose **Preferences -> Call handling-> Call Forwarding**

There are several call diversion options:

- **All calls:** All incoming calls are diverted to a specified number. If this option is active, all other options are ignored.
- **On busy:** If you are currently taking a call, incoming calls are diverted to a specified number.
- **On no reply:** If the user does not respond within a certain time period, calls are diverted to a specified number.

You can save, activate, or deactivate your changes by choosing **Options** followed by the appropriate **menu item**.

2. Forward to preset number:

If you are taking a call when another call comes through, you can transfer it to a pre-defined number. This might be your office number or the number of your secretary.

3. Enter the number to which you want to transfer calls by choosing **Preferences -> Call handling -> Forward to preset number** and save the number by choosing **Options -> Save**.
